Abstract: *Agile processes and Extreme programming (XP) are highly talented activities in Software Engineering. Agile methods have been established successfully to increase the customer satisfaction and to decrease the response time. The Extreme programming has scope in documented cases where it has worked well for development in-house of custom software for a given organization. The Agile process is compared with Extreme Programming in view of the application development with its time. The release cycle of the extreme programming is presented. The strengths of the agile process are also presented in this paper. The link exchange method between customer and developer by using Agile project management method was presented.*
